Cálculo Diferencial e Integral I

Lista 2 - DERIVADAS

1. Utilize a Regra da cadeia para derivar as seguintes funções:

$$a. \ y = \tan\left(\frac{x+1}{2}\right)$$

$$f. \ \ y = \cos^2\left(\frac{1-\sqrt{x}}{1+\sqrt{x}}\right)$$

b.
$$y = \sqrt{1 + 2 \tan x}$$

$$g. f(x) = \cos(\sin(\cos(1-x^2)))$$

c.
$$y = \sqrt{\tan\left(\frac{x}{2}\right)}$$

h.
$$f(x) = \tan^3(\sec^2(4ax + b))$$

d.
$$y = \sin(\sqrt{1 + x^2})$$

i.
$$g(x) = \text{sen}(x^2 + \text{sen}(x^2 + \text{sen}(x^2)))$$

e.
$$y = \sqrt{1 + \tan(x + \frac{1}{x})}$$

j.
$$f(x) = sen((x+1)^2(x+2))$$

2. Seja $f(x) = \frac{x}{x^2 - 4}$, determine $(f^{-1})'(3/5)$. Considere $D(f) = [0, \infty) - \{2\}$.
